

Gov. Brian Sandoval is championing AB474 this session to help get Nevada's opioid epidemic under control...

NV AB474, Section 53 of this bill requires a practitioner, to have established a bona fide relationship with a patient and to take certain actions, including performing an evaluation and risk assessment, creating a treatment plan and obtaining the informed written consent of the patient, before initiating a prescription for a controlled substance listed in schedule II, III or IV for the treatment of pain for the patient.

"We lose one Nevadan a day with regard to opioid abuse and that is one too many,"
— Governor Sandoval

Helping make a difference in our patient's lives.

Developed by both MD and PhD professionals, at diagnosticIQ, we offer multifaceted, evidence based approach assessments to assist in diagnosis and treatment of your patients.

Choose from one of diagnosticIQ's Patient Reported Outcome Assessments...

At diagnosticIQ we offer PRO (Patient Reported Outcome) Assessments that can assist you and your office in better evaluating your patients functions, their objectives and needs to provide and improve better clinical outcomes through quantitative analytics in order to maximize your patients qualitative metric performance.

Asking Better Questions...
